- Claim 119 (new) A method of microbial production of Lthreonine or L-homoserine by Corynebacterium, comprising the steps
 of:
 - (a) increasing a copy number of a gene encoding a pyruvate carboxylase, wherein increasing the copy number is achieved by transforming said Corynebacterium with a vector comprising said gene with the isolated polynucleotide encoding a polypeptide comprising the amino acid sequence of SEQ ID NO:2 and (b) culturing said Corynebacterium in a medium.
- Claim 120 (new) The method according to claim 119, wherein said isolated polynucleotide comprises the nucleotide sequence of nucleotides 165 to 3587 of SEQ ID NO:1.
- Claim 121 (new) The method according to claim 119, wherein said isolated polynucleotide comprises the nucleotide sequence of SEQ ID NO:1.
